TRIALS AND TRIBULATIONS OF HALEMA'UMA'U CRATER: 200 Years Old and Still Going

**Tuesday, January 17 at 7 pm
Kīlauea Visitor Center Auditorium**

Halema'uma'u, the large crater within Kīlauea Volcano's summit caldera, has a checkered past and an uncertain future. It has enthralled visitors with its lava lakes, enticed at least three people to their deaths in past decades, and served as a centerpiece for countless photographs and paintings. **Don Swanson**, a USGS geologist at Hawaiian Volcano Observatory, traces the volcanic history of Halema'uma'u and includes personal anecdotes about the 1967-68 eruption.

Program presented in cooperation with: **Hawaiian Volcano Observatory**
